With Agentic AI Developers Have Trouble Reaching Customers

56%

of projects take 6-18 months to go live
after initial development

85%

cite integration complexity as a top
hurdle when deploying agentic AI
systems

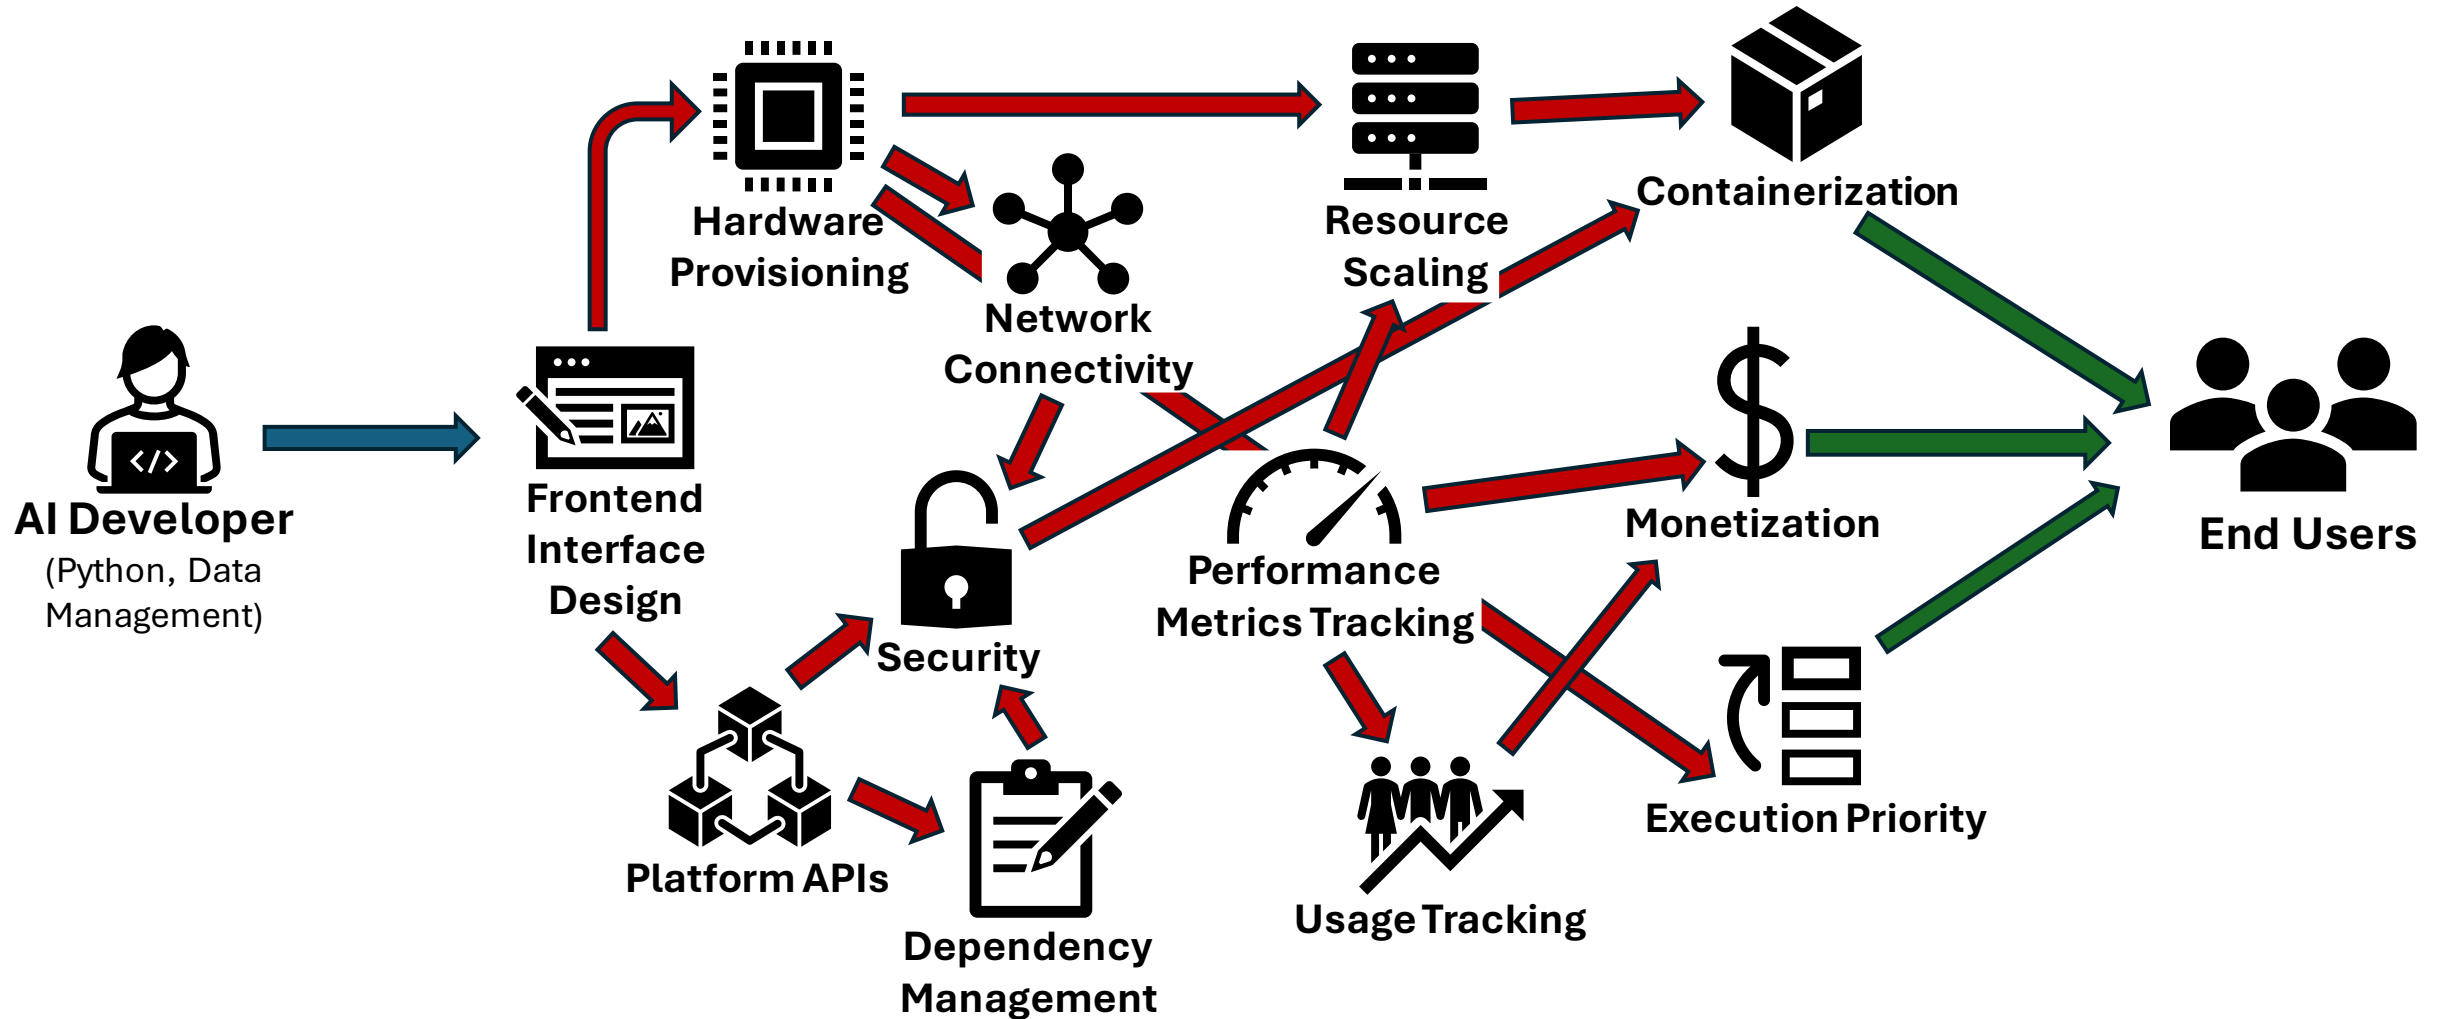

Only 1/10

Projects make it past the demo stage

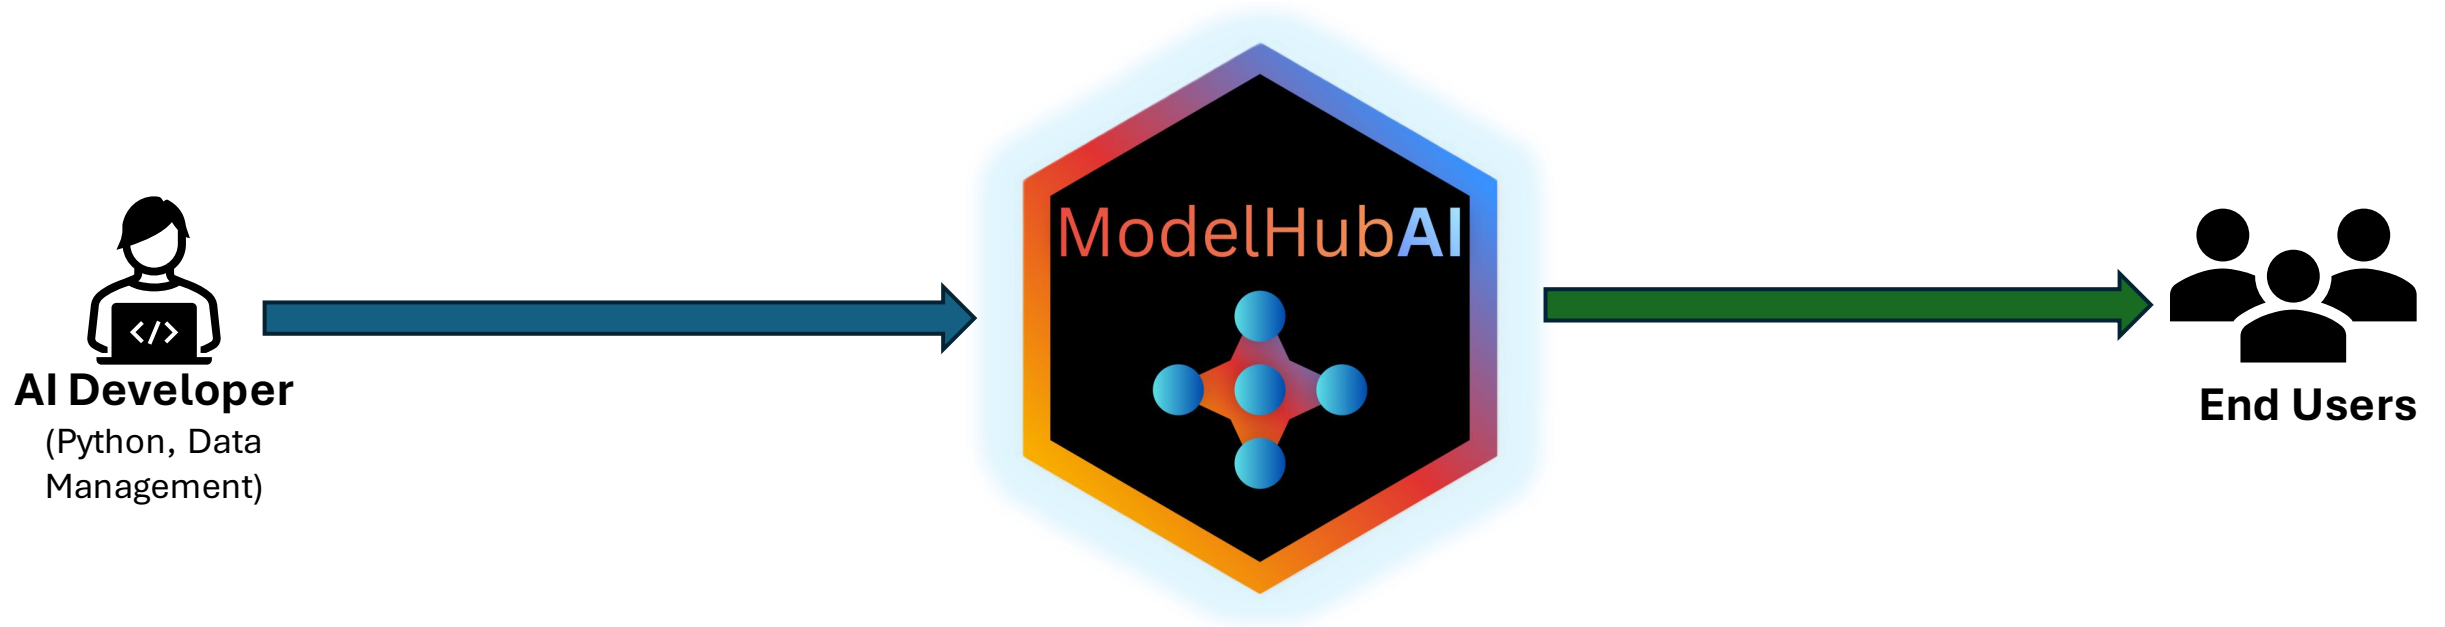

-\$90,000

in losses from projects that never reach
deployment

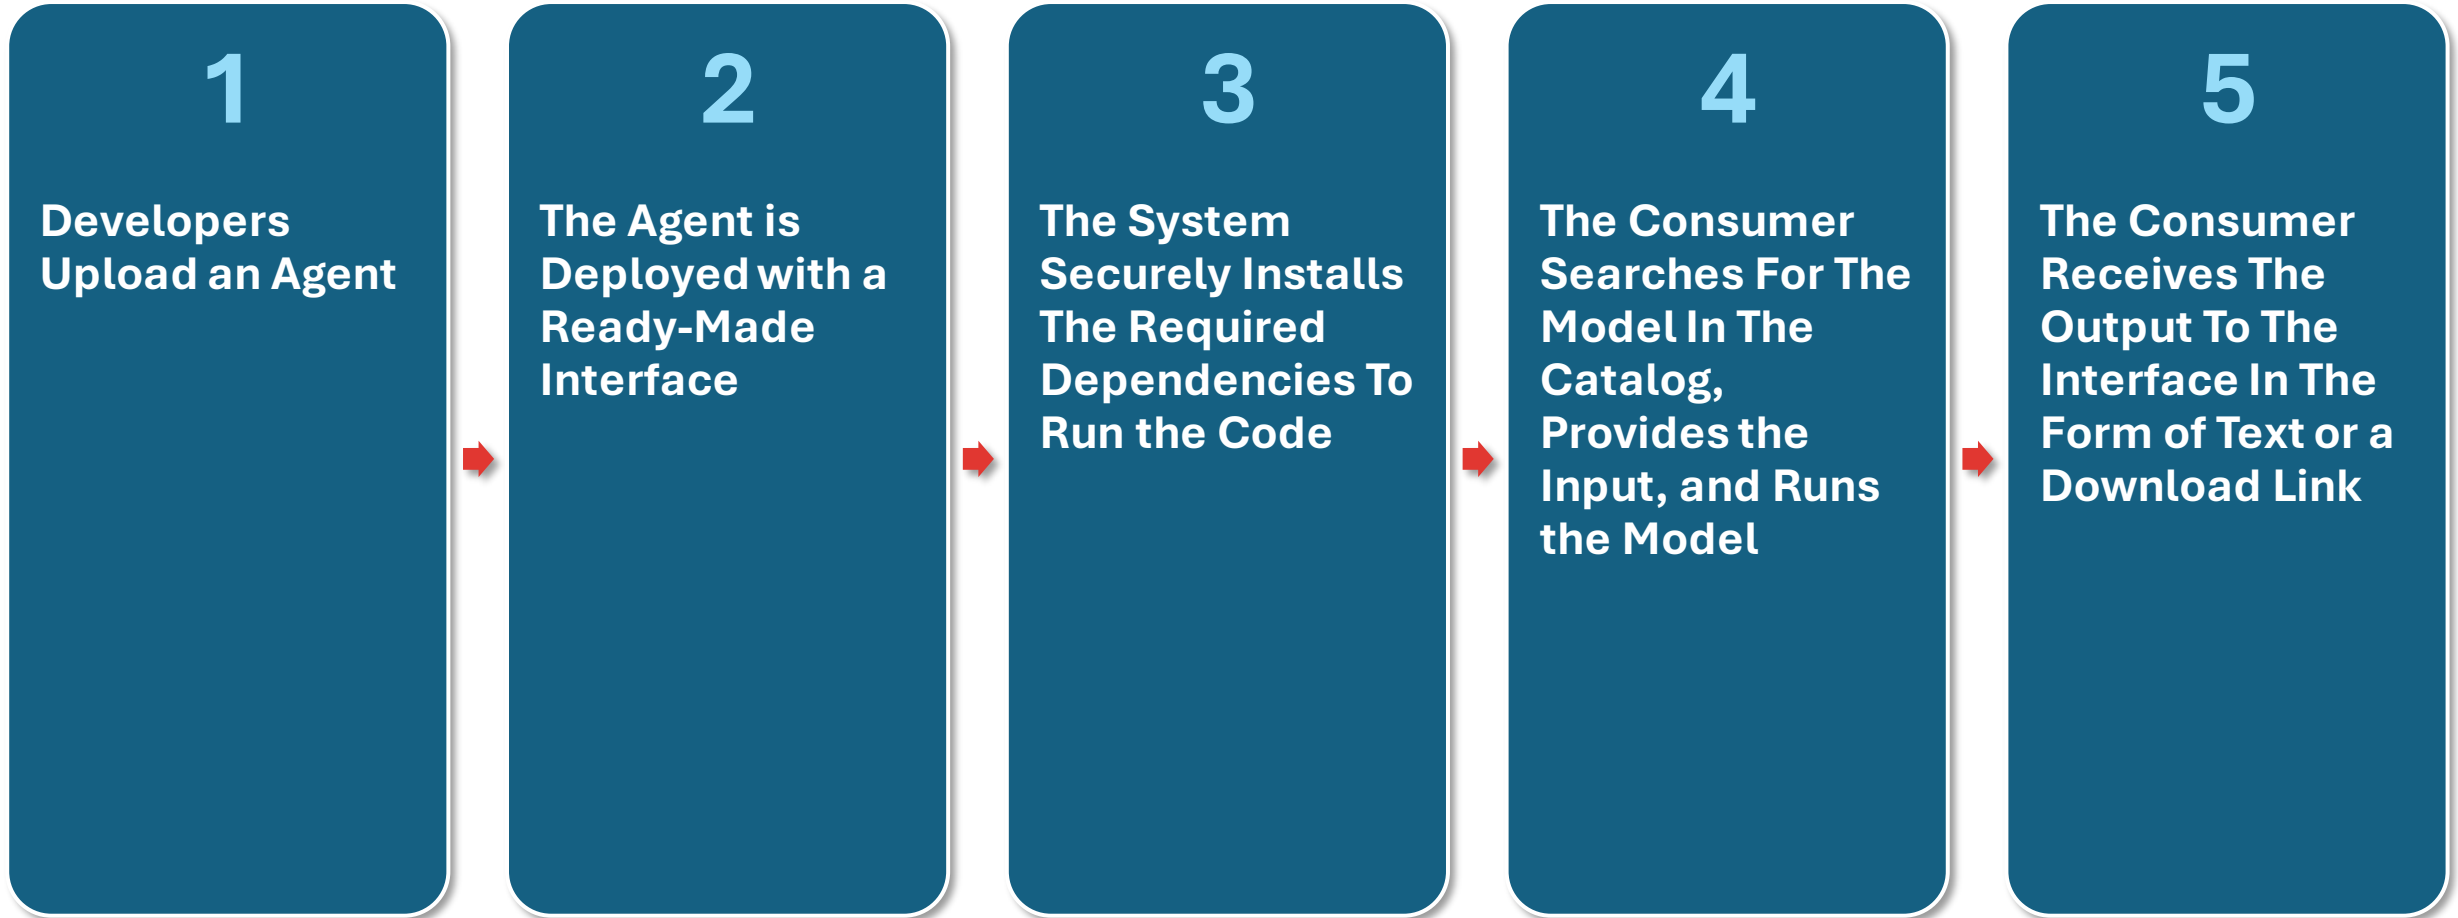

The Complexity of AI Agent Deployment After Model Creation

The Developer Handles Their Model **We Handle The Rest**

From Missed Opportunity to Useful Technology

The Magic Under the Hood

Entry-Point Discovery

Leverages AST (Abstract Syntax Tree) Search to automatically locate the `handle_request` function, the entry-point our system uses to send the user input to the developer code

Isolated Workspaces

Generates dedicated secure workspace folders in a Docker Volume for every uploaded agent, ensuring data integrity and privacy.

Smart PIP Install

Automatically installs missing dependencies into an agent's workspace folder preventing system-level package errors and speeding the execution of models after the first run

Asset Provisioner

Uses Regex Discovery to pre-load model weights and dependencies into a cached shared volume to maintain isolation of the Sandbox runtime environment

A Big Solution For Smaller Developers

Total Addressable Market

\$200B+

Global AI Agent and Workflow
Automation Market

Serviceable Addressable Market

\$15B

Independent AI Developers and
SMB Agent Deployment

Serviceable Obtainable Market

\$250M

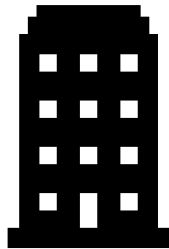

US-based AI Startups and
Enterprise Pilot Programs

- 3M+ Active AI Developers on GitHub/HuggingFace
- 60% lack an easy way to monetize their agents
- 90% of companies are searching for secure, AI hosting solutions

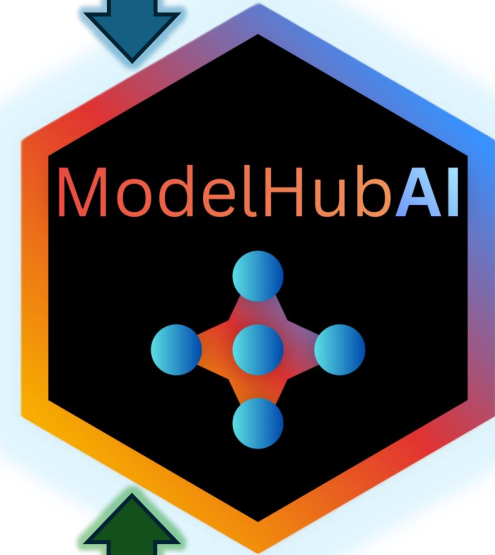

A Flexible Platform with a Hybrid Strategy

- Agents Visible to **Everyone**
- **Platform Earns Revenue** From Usage Token Purchases
- **Developers Earn A Percentage of Revenue** From Usage

- Agents Visible to Members **Registered with an Organization**
- **Companies Pay To Host** a Private Instance
- **Cost Is Determined** By Computation Time and Token Usage
- Would Require a **Multi-tenant Orchestration Layer**

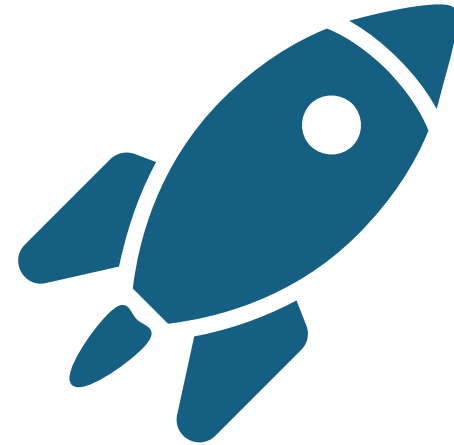

Fills the Whole Gap

	ModelHubAI	Amazon Lambda	HuggingFace Spaces
Primary Goal	Secure, automated agent hosting with built in monetization	Run code for any type of application	ML Model Demos and Research
Secure Agent Hosting	✓	✓	✓
Automatic UI Generation	✓	✗	✗
AST-based Automatic Entry Point Detection	✓	✗	✗
Automatic Model Asset Provisioning	✓	✗	✗
Smart Dependency Management	✓	✗	✓
Secure Execution Environment	✓	✓	✓
Built-in Usage Tracking for Monetization	✓	✗	✗

ModelHubAI in Action

A Brief Walkthrough of The System
